To whom it may concern:

I am writing this about the proposed shoreline project at 102 Creek Circle. I strongly disagree that this project is needed. This property has had no erosion issues in decades. The property does not see any pounding wave action so why does it need such a large scale project to protect it. I live on Cabin creek and our channel out of the creek is narrow and already has problems with filling in. We do not need to do this project and take a chance at jeopardizing the channel. I do not understand how we can just give away public water way so as to protect one person's property. Several years ago I had to put rip rap down in front of my bulkhead and I wanted to extend it out 10 ft. and the county would only let me go 6ft. But now we are going to allow this homeowner to dump 800-1100 truckloads of fill dirt into the creek. This is not right and must not be allowed to happen.
